

Fusion of technologies

Different industries converge. This results in new technologies that set revolutionary processes in motion.

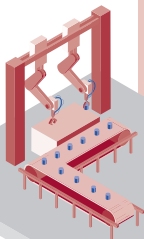

Clean Tech

Ecologically clean technologies can help reduce emissions and conserve resources. CHILLVENTA showcases new developments in this field.

Internet of Things

Networking machines with digital information technology leads to self-optimised production (EUROGUSS). The technical basis for this is provided by embedded technologies. Find them on display at embedded world, the leading international fair for the sector.

Cybersecurity

Cybercrime is a growing danger. Reliable information technology is a prerequisite for Industry 4.0, for example. Find the solutions at it-sa.
